STARS™ Equipment Management Software

The key to a successful equipment maintenance program is having a computer based information management system that captures all relevant equipment and vendor information. IDI will be responsible for maintaining an up-to-date inventory of all biomedical and imaging equipment. We will ensure that equipment repair service and preventive maintenance meets or exceeds manufacturer specifications. IDI's equipment maintenance program documents all scheduled, non-scheduled, internal, or outsourced service performed. The use of this program is at no cost to the facility for the duration under IDI's Program. Listed below are a few highlights of this system.

Regulatory Management:

- Meets JCAHO Management of the Environment of Care Standards
- Provides risk assessment evaluation, documentation and monitoring
- Contains PM, safety and work order scheduling and reporting
- Monitors:
 - Hazard Alerts and recall notices
 - Equipment incidents and operator errors

Advanced Scheduling:

- Schedule by risk, device function, manufacturer/model or individual devices
- Schedule frequency is daily, weekly, monthly, quarterly or yearly
- Scheduling includes 4 PM procedure levels, 1 safety level, physical location and definable PM and safety procedures

Powerful Features:

- Asset management and depreciation system
- Advanced schedule matrix system
- Comprehensive reporting system, over 130 format selections
- Supports multiple departments and facilities
- Advanced database for vendor related information

Off-Site Connection and Use:

- Connect to the equipment management program from any area that you have access to the internet
- Print reports, work order, etc., in a matter of minutes
- Off-site backup server, 24x7
- 2 password entry

- Available to any appointed hospital representative
